Prize Winning Body Designs

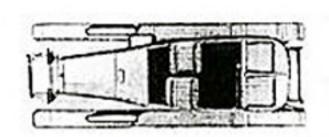

Showing the Tendency Toward Conservatism in High Grade Cars

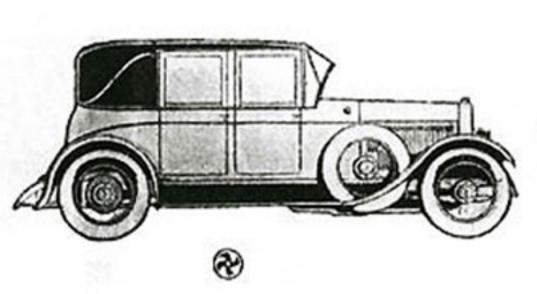

The first prize was awarded to Philip Brostrom for this substantial looking sedan · limousine which has attractive lines and provides exclusiveness for rear seat passence of quarter windows

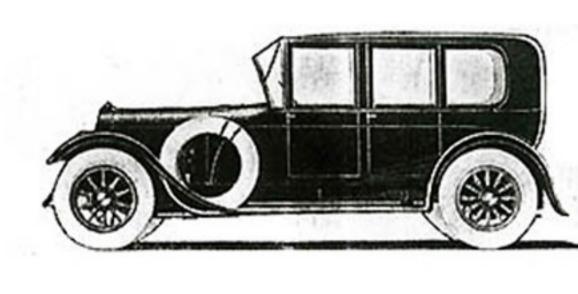

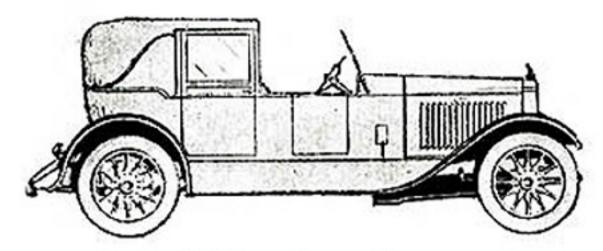

The sedan, with downward curved moulding, designed by J. J. St. Croix, received second prize. It has a leather top with outside folding joints, but is non-collapsible

Conservatism in High Grade Cars

This brougham
by Harrold
Gottlieb, which
received honourable mention,
has the appearance of a landaulet but the
top does not
fold back as in
that style of
vehicle

Honourable
mention was
also awarded to
this striking 4passenger coupe
by Richard H.
Burke. It is a
style of car
which is increasing in popularity rapidly

ERE are the five sketches of motor car designs which won cash prizes or honourable mention at the recent first annual Body Builders' Show in New York. In this competition were entered many of the leading custom body builders. The drawings are shown here, not only as excellent examples of the present styles in American motor cars, but to lend vivid proof to the statement that the rule of the day, in regard to automobile lines, calls for rigid conservatism. There is nothing even slightly radical about any of these cars and yet there is not one of them whose owner would not feel a justifiable pride in its appearance in any motor car gathering, according to present standards.

The conditions of the contest were that each design should illustrate a complete car with a body to accommodate four or more passengers and that it must fit some one of the chassis used in substantial quantities by any automobile manufacturer, without altering the body mounting dimensions. Readers who are contemplating having new cars built, may find some useful suggestions in these prize winning sketches. We shall be glad to supply addresses of the designers.
